

POP-UP EXHIBITION DISPLAY STAND user instructions

1

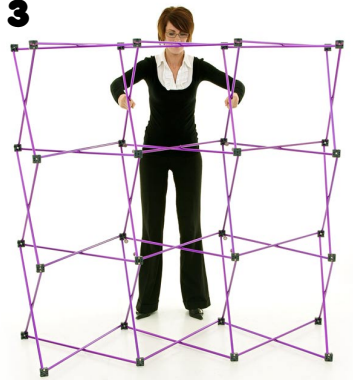

3x1 / 3x2 / 3x3 / 3x4 / 3x5 Curve / Straight Pop Up
 A typical Pop-Up exhibition display contains:
 Tubular metal pop-up display frame
 Magnetic bars
 Printed display graphic panels & spotlights
 Portable storage / transit case

2

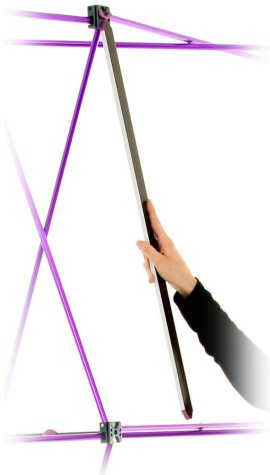

Take the tubular metal frame and grab either end. With a throw action, open out the frame.

3

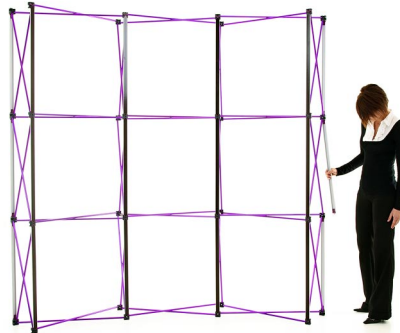

Open the frame to full extension. The frame will click into place when correctly assembled.

4

Lock the frame into place by placing the magnetic bars into the plastic magnetised node slots.

5

Offer each magnetic bar to the frame node slots and the bars will snap into position. Ensure all bars are in position (including rear bars - as shown)

6

Carefully unroll each of the graphic panels and hook the top node over the retaining hook at the top of the pop-up display.

7

Start from one end and work your way across; placing all graphic panels along the top and lining the graphics up as you go along.

8

Ensure the graphics line up with the magnetic bars. Re-position graphics for perfect alignment.

9

Your Pop-Up exhibition display stand is now ready.
